Profile:

I'm a passionate web developer with knowledge of ASP.NET framework, Vue.js and Node.js, having also a strong motivation of learning new technologies and always looking for ways to improve. Adapted to working in a team or alone based on my experience in working as a web developer. Overcoming challenges by brainstorming new ideas and identifying solutions.

Technical Skills:

- C#
- Javascript Es6
- Jquery
- Vue/Vuetify
- Node/Express
- Less/Sass
- Bootstrap
- Gulp/Webpack
- SQL/SQLite
- Git/GitHub/GitLab

Employment History:

05.2014 - present   **.NET developer**   **vast:visibility Iasi Branch** (formerly known as **SDP**)
Responsibilities:

- **2017 - present:**
  Project link: https://bil2.kasko.no/Om-deg
  Kasko is a comparison site for car insurance in Norway. Currently working on Kasko using ASP.NET MVC framework, this is a brand new project. My responsibilities for this project were, implementing the design of the site using html/C#, bootstrap and custom css, jQuery for client side validations and any other client side functionality.
  Currently my work on Kasko involves frontend and backend work, removing/adding new controls on the form or adding/changing controls functionality. ***Tech stack used on this project:*** *C#, jQuery, Bootstrap, Less, SQL.*

- **2016 - 2017:** In this time period I was mostly focused on Ad development using DFP (DoubleClick for Publishers from Google). My tasks where to create ad templates using HTML, CSS, javascript with no libraries, that will be used on the comparison sites that we have. Also in this time period I worked on developing email templates, using Salesforce Marketing cloud to manage our email automation and creation. For this job my responsibilities where to create and setup the emails using HTML, internal CSS styling and AMP script (this was needed to populate the email template with data). ***Tech stack used on these projects:*** *Html, css, javascript, AMP script.*

- **2014 - 2016:** Creating insurance comparison sites using ASP.NET Web Forms framework. Most of the work I've done was debugging, fixing, improving or adding new features to existing platforms on the frontend. The stack I used was mostly HTML, CSS, javascript (jquery), C# and SQL (mssql). Some examples that I worked on are:
  - https://quotes.mustard.co.uk/car/AboutYou.aspx
  - https://quotes.thebikeinsurer.co.uk/quote/
  - https://motorhome-insurance.asda.com/AboutYou.aspx#
  Tech stack used on these projects: *C#, jQuery, Less, SQL.*

09.2012 - 05.2014	**Software Developer** **Responsibilities:**	**Gambit International SRL**

- Game development using Unity engine. I used C# scripting in creating very basic games these were internal.
- Static sites used for presentation using **ASP.NET Web Forms framework.** Stack used was **HTML**, **CSS**, **javascript**.

Languages:

English	fluent in speaking and writing
