Profile:

I'm a passionate web developer with knowledge of ASP.NET framework, Vue.js and Node.js. Having also a strong motivation of learning new technologies and always looking for ways to improve. Adapted to working in a team or alone based on my experience in working as a web developer. Overcoming challenges by brainstorming new ideas and identifying solutions.

Technical Skills:

❖ C#, Javascript, Vue, Vuetify, Node, Express, less/scss, bootstrap, gulp, webpack, SQL, SQLite, Git version control, Bamboo Continuous Integration Tool.

Employment History:

05.2014 - **.NET developer** **vast:visibility Iasi Branch** (formerly known as **SDP**)
present **Responsibilities:**

- **2017 - present:** Started working on project Kasko with **ASP.NET** stack but this time using **MVC framework** on a brand new project. Created the frontend part for the comparison site using **Bootstrap** as a css framework, **lesscss** as a css preprocessor for custom styling. My contribution to the project on the **frontend** was creating the question set **HTML**, **lesscss** structure, creating the Views, making API calls to the backend, client side validations using custom javascript and any other client side functionality using javascript, hide/show different controls. For the **backend** was creating some custom controls using the custom internally built framework.

- **2016 - 2017:** In this time period I was mostly focused on Ad development using **DFP** (DoubleClick for Publishers from Google). My tasks where to

create an ad template using **HTML**, **CSS**, **javascript** with no libraries, that will be used on the question set (the comparison sites). Also in this time period I worked on Email templates creation, using **Salesforce Marketing cloud** to manage our email automation and creation. For this job my responsibilities where to create the email templates using **HTML**, internal **CSS** styling and **AMP script** (this was needed to populate the email template with data).

- **2014 - 2016:** Creating insurance comparison sites using **ASP.NET Web Forms framework**. Most of the work I've done was debugging, fixing, improving or adding new features to existing platforms on the **frontend**. Creating a new site was a fast process since it didn't require much development work, just reusing existing structure and change it in accordance to the specifications. The stack I used was mostly **HTML**, **CSS**, javascript (jquery), **C#** and **SQL (mssql)**. Some examples that I worked on are:
  - https://quotes.mustard.co.uk/car/AboutYou.aspx
  - https://quotes.thebikeinsurer.co.uk/quote/
  - https://motorhome-insurance.asda.com/AboutYou.aspx#

09.2012 - 05.2013	**Software Developer**	**Gambit International SRL**
	Responsibilities:	

- Game development using Unity engine. I used C# scripting in creating very basic games these were internal.
- Static sites used for presentation using **ASP.NET Web Forms framework.** Stack used was **HTML**, **CSS**, **javascript**.

Languages:

English	fluent in speaking and writing
Romanian	mother tongue

Interests:

Computer/Console gaming, Card/Board games, Kickboxing, Fitness, Outdoor Activities, Archery, Tennis, Basketball.
